GridMind Live Paper Test

Daily Report: Delivery Day Sunday, November 1, 2026

Day 7 of 15 | Written October 31, 2026 at 2:30 PM | Ledger intact

Public version: the ENTSO-E day-ahead prices are left out because their license does not allow redistribution.

1. Summary of the Day

On Sunday, November 1, 2026, the best result came from PPO (seed 44), which earned €138.13. That is about 67% of what a trader with perfect foresight could have made (€205.55), so roughly 33% of the possible profit was left on the table. Encouragingly, none of the agents lost money, and every trading agent beat simply doing nothing. Looking at the whole test so far, the MILP agent that plans on yesterday's prices is in the lead with €1,769.36 in total, or €252.77 per day on average.

Table 1. Profit by agent in EUR on November 1, 2026 and since the test began on October 26, 2026

Agent	Day	Total	Per day	% of bound	Days	Losses
Perfect foresight (bound)	205.55	3,214.66	459.24	100.0	7	0
PPO seed 44, LEAR	138.13	138.13	138.13	67.2	1	0
PPO seed 55, LEAR	130.62	130.62	130.62	63.5	1	0
PPO seed 11, LEAR	126.53	126.53	126.53	61.6	1	0
PPO seed 33, LEAR	125.32	125.32	125.32	61.0	1	0
PPO seed 22, LEAR	120.45	120.45	120.45	58.6	1	0
MILP, LEAR forecast	67.07	67.07	67.07	32.6	1	0
MILP, 7-day average	40.19	40.19	40.19	19.6	1	0
MILP, yesterday's prices	36.84	1,769.36	252.77	55.0	7	1
Threshold rule, LEAR	16.39	16.39	16.39	8.0	1	0
Do nothing	0.00	0.00	0.00	0.0	7	0

2. Status of the Test

The hash chain of the ledger is intact (99 entries), which means that none of the earlier entries has been changed since it was written. The schedules for November 2, 2026 have not been fixed yet; they are due before noon (Warsaw time) on November 1, 2026. This was day 7 of the planned 15-day test. There are 8 days to go.

3. Figures

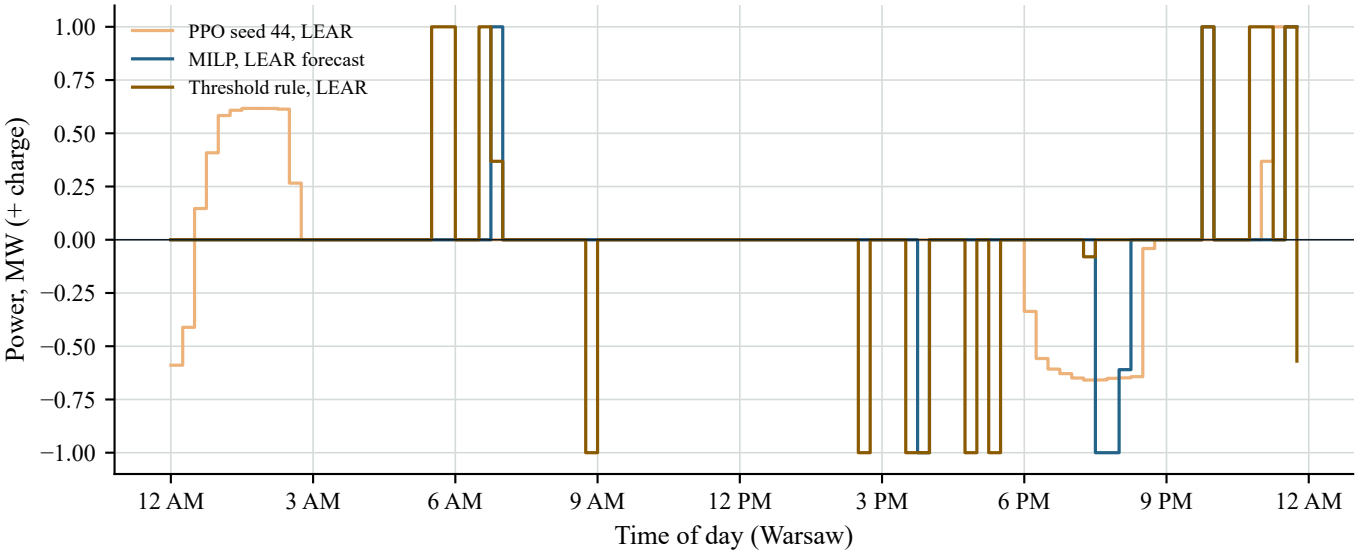

Figure 1. Schedules of 3 agents, fixed before the gate for November 1, 2026

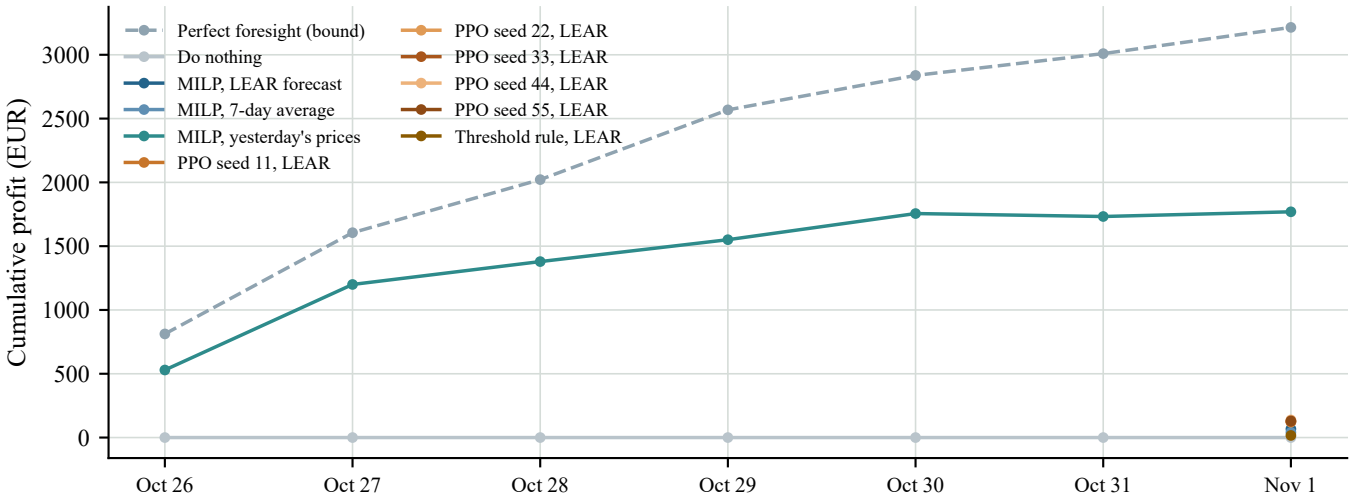

Figure 2. Cumulative profit by agent since October 26, 2026

Source: own study based on ENTSO-E Transparency Platform 12.1.D

Note: This is a paper-trading test. Each schedule is locked in before the noon deadline on the previous day and then scored against the published day-ahead prices; no order is ever sent to the market. Profits already include a wear cost of €10 per MWh charged or discharged, and the battery is rated at 1 MW / 2 MWh.
